Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter, which the applicant regards as his invention.

2. Claim 5 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

It is not clear, which centers of the heat dissipating plates are meant in the claim.

Generally each heat dissipating plate is flat body (claim 1, line 5). Looks like the same inventor erroneously transferred this claim in this application from the copending application 10/667,369.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-7 (claim 5 as best understood by examiner) are rejected under 35 U.S.C. 102(b) as being anticipated by Kikuchi et al (Japan Patent JP408222665A). Kikuchi et al teach a heat-dissipating plate module 30, Fig. 1, comprising:
a heat-conductive base 31, which is installed on a heat-generating component of an electronic device; and a plurality of heat-dissipating plates 32 installed vertically at equal intervals from each other on the heat-conductive base 31, each of which has a flat

Art Unit: 2835

body with a plurality of pillar-like protruding round pillar equal in length parts 35 and the protruding parts 35 of any two adjacent heat-dissipating plates do not overlap, forming an airflow space with continuously curved airflow paths in between. Regarding to the claims 6, 7: Claims are directed to different methods of making said heat dissipating plate module, and therefore, have not been given a patentable weight. It is well settled that the presence of process limitations in product claims, which product does not otherwise distinguish over the prior art, cannot impart patentability to that product. (In re Johnson, 157 USPQ 670, 1968). Also: "Even though product – by – process claims are limited by and defined by the process, determination of patentability is based on the product itself. The patentability of a product does not depend on its method of production. If the product in the product-by process claim is the same as or obvious from a product of the prior art, the claim is unpatentable even though the prior art product was made by a different process" (In re Thorpe, 777 F. 2d 695, 698, 227 USPQ 964, 966 Fed. Cir. 1985).

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure: Chen (US Patent 6,390,188); Hanners (US Patent 6,128,188); Chu (US Patent 4,638,858) and Chen (US Patent Application Publication 2004/0244947 A1).
